All measures on this document are from the Youth Risk Behavior Survey (YRBS), a national survey developed by the Centers for Disease Control and Prevention. For more information about the YRBS see the link on the other side of this document.

The Mental Health Matters Coalition created the **Youth Mental Health Scorecard** to assist the community to identify and address youth mental health needs. The scorecard includes a subset of items from the Youth Risk Behavior Survey* organized into 4 categories that highlight important factors associated with youth mental health.

Together these topics highlight key issues to consider related to youth mental wellbeing, and data included here can help to put a spotlight on areas where more support and intervention are needed in the community.

Social Emotional Wellbeing

Social emotional wellbeing items provide an overview of the state of mental health of youth in the Chippewa Valley, including the percent of young people at risk for depression, experience anxiety, and who have considered suicide.

Risk Behaviors

Risk behaviors including tobacco, alcohol, and other drug use can be both a symptom and a cause of mental health issues. These risk behaviors are often unhealthy ways of coping with stress.

Protective Factors/Resilience

Protective factors lessen risk for mental health issues. Supportive relationships with adults are critical to youth resilience. Other protective factors that support youth mental health are feeling safe at school and meaningful participation.

Risk Factors

Risk factors include measures that when present in the lives of youth are associated with an increase risk for mental health issues. Risk factors on the scorecard include indicators of physical violence and bullying, food insecurity, screen time, and lack of sleep.

Some demographic groups are at higher risk for poor mental health. For example, consistent with state and national reports, **more youth who are female or identify as LGBTQ** in Chippewa county report mental health problems compared to their peers, and disparities can exist by race or ethnicity and for youth living in poverty. It is important to consider the needs of these groups when planning for support and intervention.
